Product Description

Co2 Fractional Laser Wart Removal Equipment With USB Update System And 10600nm Wavelength

Product Description

Fractional co2 laser Theory:

This technology is known as Fractional Photothermolysis theory (dot-matrix light and heat decomposition), the 10.6μm far-infrared laser will evenly mark with tiny holes, and then cause a series biochemical reactions inside the skin, thus to reach the results

of skin lifting & resurfacing, pigments and scar removal, etc, finally let the skin return to young again.

German import scanning head

- **Longer life span**

Imported scanning heads generally use for 3 - 5 years, with low failure rate, more accurate scanning and long service life.

- **Strong energy, more accurate**

Strong energy, uniform light emission, more accurate scanning, lower failure rate and long service life.

- **Scanning accuracy**

The scanning rate of import is more accurate

Section 7 light guide arm

- **counter weight**

Light guide arm adopts counter weight design, which makes it more flexible to use and convenient to operate.

- **Aluminium material**

The light guide arm is made of high-grade aluminum, which has high stability and is lighter.

- **Tri - color optional**

Equipped with silver, red and blue light guide arms, it can meet different preferences of customers.

How does treatment work?

It concentrated thermal heating of the tissue inner layers induces collagen and elastin contraction and regeneration of these proteins in the longer term. These molecular signals activate the entire wound healing process of the body's local immune system. The treatment outcome is the complete remodeling of the tissue in addition to re-establishment of firm "young like" tissue embedded with string-like, thick and long collagen fibers.
